

Hurricane Fabric has Egress Capability Approval

The Insurance Industry's Mitigation requirement for homeowners have increased the requirements for Approved Protective Devices for all Openings in a Residence. This has resulted in the need for one or more Openings to have Egress capability.

Hurricane Fabric has received approval for a Reverse Attachment Addendum for its Product Approval. This Addendum allows Installers to mount the Anchor (Male and Female Panelmates as well as Concrete Flush Anchors) and use our innovative Clip on the inside of the Opening. We then use Thumbscrews to attach the Hurricane Fabric to the Anchor. The Thumbscrew will avoid the need for tools to attain Egress.

Typically, the Reverse Mounted Clip will be used on either side and attached with Thumbscrews while the other side can be Surface or Trap mounted with standard Sidewalk Bolts.

This capability presents the Homeowner with an economic alternative to replacing Doors with Impact Rated models and still achieve the required Protection rating for Insurance Premium discounts.
